◎ Ozalentour® - The Solution

White Paper created by the founder of Ozalentour - JD - President ProduClic

The purpose of Ozalentour is to address the various digital and economic challenges related to the proliferation of cryptocurrencies and networking platforms: Facebook, TripAdvisor, Groupon, Twitter, Instagram, Pinterest, LeBonCoin...

The primary goal of the platform is to develop a new economy: one that is parabanking, inclusive, stable, independent, self-sufficient, sustainable, guaranteed and unique. Each verified Ozalentour member will be able to benefit at any time from a <u>decentralized anti-crisis portfolio</u> within a social marketplace centralizing <u>human experiences as well as all types of local and tourist good deals</u> (e.g. Leisure Activities, Bars & Restaurants, Good Deals, Proximity Services...).

This document introduces our project, based on a platform called "**Moteur de Proximité** (Proximity Engine)" offering a stable and decentralized token (ERC20) named OZAPHYRE® (OZP). This cryptocurrency belongs to the family of inflationist stablecoins backed by the average value of €uro (~ 1.10 $). This Utility Token can be used within the Ozalentour crypto-market as well as on various partner exchanges. The association of these elements aims to create a new opportunity for financial services to be innovative, human and eco-responsible.

Observations and Challenges

<u>In a context of un-banking of our society</u> and thanks to the advent of the Internet, billions of people around the world have access to multiple digital knowledges and services.

Starting from a €40 smartphone, these services are now available wherever you are in the world (or almost). This connectivity has boosted the global economy giving more and more people access to the banking, neo-banking and para-banking financial ecosystem.

What is worth noting is that the majority of these digital services are fragmented across a multitude of applications and digital platforms.

An application for your bank, another one for your emails, two or three for your social networks, LeBonCoin, Groupon, Tripadvisor or even your cryptocurrencies wallets …

At the same time, these very same applications are also in turn fragmented with a multitude of keywords, such as categories, options, filters, ...

The main challenge is therefore a big one: to offer a simplified platform that centralises our daily lives needs, local products and all types of activities and cultural visits.

To develop this ecosystem, Ozalentour provides **<u>8 major themes playing the role of an envy explorer</u>**:

1. **Leisure activities**
2. **Bars & Restaurants**
3. **Good Deals**
4. **Wellness Centers**
5. **Events**
6. **Accommodations**
7. **Proximity Services**
8. **Cultural Visits**

The first challenge is to offer a **<u>Good Deals Explorer</u>**, ordered by date or by geo-location. These Deals or "Offers" are easily publishable by any member on the website **Ozalentour**.

Note that each published "Offer" is automatically managed by our AI system (under development). **This option is available to any member wishing to start the Ozalentour experience and free of charge during the beta testing period (1st March - 1st September 2020).**

The second challenge is to propose a **<u>Proximity Social Network</u>** summarizing recently published offers, while allowing the publication and discovery of photos and videos attached to the hashtags technology.

The ultimate challenge is to centralize on Ozalentour : a **<u>Good Plans Explorer</u>**, a **<u>Proximity Social Network</u>** and a **unique wallet** offering a **<u>local cryptocurrency acting as a store of value</u>**.

◈ OZAPHYRE® - (OZP) – The Stablecoin

OZAPHYRE (OZP) - The popular local cryptocurrency • ERC20 TOKEN - STABLECOIN 1¤ ~ 1€

OZAPHYRE (OZP) goal is to provide a useful and stabilized asset on the average value of Euro. This digital asset acts as a local currency to facilitate trade and money transfers between users and bring a unique, easy-to-use, fee-free and eco-friendly payment & collection system

Eco-friendly by offering a POS and cashless payment system via Ozalentour applications and Ozaphyre blockchain. Ozalentour also aims to research and propose a new blockchain system which is green and peer-to-peer.

This Utility Token value of ~ $ 1.10 (ie ~ € 1.00) can be used on the Ozalentour crypto-market as well as on our partners platforms listed on Ozaphyre.com. Payments in OZP are made via Ozalentour by QRCODE or NFC.

Observations and Challenges

In a climate of economical and geo-political uncertainty and with the proliferation of neo-banks and cryptocurrencies (+ 4000): it is essential to take the lead by adopting a stable digital money, playing the role of a store of value through a decentralized, encrypted and unique ecosystem.

Blockchains and **cryptocurrencies** precisely exhibit similar properties that can solve some accessibility and reliability problems. These include governance distribution, which ensures that no single entity can control a blockchain network on its own.

Anyone with internet access can therefore participate and benefit from cryptographic security to protect and transfer their funds … However, existing blockchain systems are not commonly used yet. In fact, the use of blockchains and cryptosystems in the few existing marketplaces is hampered by high volatility and lack of scalability. As a result of these limitations: their function as a store of value is still rather limited.

In addition, some projects have also attempted to disrupt the existing system by bypassing legislation instead of innovating in terms of compliance while going further in the fight against money laundering and terrorism financing. Furthermore, to ensure this new peer-to-peer exchange system, we are convinced that we need to go deeper in the collaboration with governments, financial services and players in the cryptomarkets.

This approach can also lead to a real advance towards a low-cost global financial system that is much more accessible, human-oriented and value-adding for local businesses.

The challenge: To offer a stable digital currency backed by the average value of euro, which can be transferred from peer-to-peer through the blockchain and Ozalentour applications.

Opportunities

Before diving into the technical details of **OZAPHYRE (OZP)**, it seems essential to us to outline our convictions for the ecosystem we wish to cultivate around this initiative:

- We are convinced that OZAPHYRE (OZP) is a great opportunity to create a local reserve economy.
- We are convinced that OZAPHYRE (OZP) will play the role of win-win loyalty token.
- We are convinced that OZAPHYRE (OZP) coupled with Ozalentour will boost the local economy.
- We are convinced that everyone has the inherent right to control the fruit of their legal work.
- We are convinced that a free and instantaneous global monetary circulation will create immense opportunities.
- We believe that more people should have access to cheap financial services and capital, as well as investments that generate short-term profits.
- We are convinced that public confidence in decentralized forms of governance will gradually strengthen year after year.
- We are convinced that a global currency and a financial infrastructure must be 99.9% decentralized and public.
- We are convinced that the expansion of financial inclusion, the support of ethical stakeholders and the continuous protection of the ecosystem's integrity are our common responsibility.
- We are convinced that Ozalentour will increase the purchasing power of members from 5 to 99%
- We are convinced that in the event of a financial crisis, Ozalentour is certainly one of the best digital solutions to protect against all bank failures, as well as any fundamental attack on freedom.

The Ultimate Challenge: <u>Democratize OZAPHYRE (OZP) and allow free money transfer for local shops and consumers around the world.</u>

WHY OZAPHYRE (OZP) ?

The world is in dire need of a guaranteed digital currency and a decentralised infrastructure.

First, protecting your digital assets on your computer and mobile device should be simple and intuitive. The same goes for global money transfers: These are often long, tedious and expensive. The idea with **OZAPHYRE (OZP)** is therefore to bring about a para-banking economy allowing to transfer money as quickly as sending a photo or a text message. The introduction of this type of innovative product will allow actors to reduce barriers related to access, cost and with very high speed of execution.

It was from this idea that the **OZAPHYRE** token **(OZP)** was born. A digital currency based on blockchain technology and the ETHEREUM protocol.

The purpose of **OZAPHYRE (OZP)** is to develop a currency and a financial infrastructure serving the needs of millions of users. **OZAPHYRE (OZP)** is made up of three components that form together a more inclusive financial system.
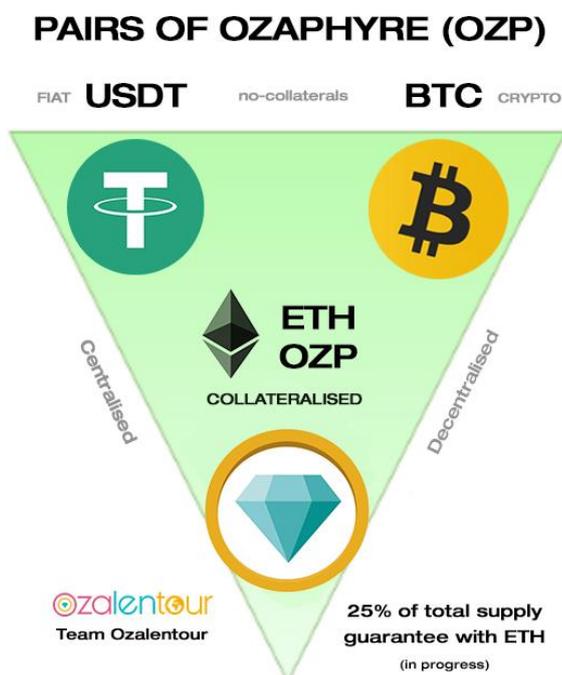

1. **This system is based on ETHEREUM : a public, secured, recognized and reliable blockchain**
2. **The value is maintained through the markets + 25% guarantee coverage in ETHER**
3. **The Token is governed by SAS ProduClic, in charge of guiding the evolution of the eco-system**
4. **OZAPHYRE (OZP) can be used to pay for all types of local goods / services**

The OZAPHYRE currency (OZP) is based on the « Ethereum » blockchain. As its goal is to reach a global proximity market, the software that implements OZAPHYRE (OZP) is open source. It can thus be used by everyone and meet the financial needs of millions or even billions of people around the world.

Imagine a free and interoperable ecosystem of financial services, created by passionate developers and a company with a humanistic and ecological vision ...

In the perspective of a massive adoption of OZAPHYRE (OZP): it is essential for the currency to be accepted in many places and easily accessible by those who wish to use it online as well as locally. In other words, in addition to being easily usable at no cost, the OZAPHYRE (OZP) rate must be constantly checked and corrected by the OZAPHYRE (OZP) Smart Contract (ERC20).

Halfway between a fiat-crypto ecosystem, OZAPHYRE (OZP) is decentralized on the ETHEREUM network while maintaining an indirect control via the Ozalentour ecosystem.

Technical Notes on OZAPHYRE (OZP)

OZAPHYRE (OZP) is an ERC-20 crypto-collateral-algorithmic stablecoin backed by an ETHEREUM collateral and a smart contract to control/rectify price deflation and inflation emanating from the markets (up to ~8%).

Permanently connected to its price, OZAPHYRE (OZP) is automatically stabilized via an algorithm that allows the adjustment of its own price depending on supply and demand from the markets. To achieve this, OZAPHYRE (OZP) Stock and Trade on its partner exchanges.

This way every investor betting on the precious **Holy Grail OZAPHYRE (OZP)** will be able to obtain a **controlled and guaranteed capital gain.** Mainly thanks to the trust of the users and the **Ozalentour** platform**.**

The global vision of OZAPHYRE (OZP)

In order to constantly offer speculative and at the same time stable services: OZAPHYRE (OZP) will be available across 3 cryptocurrencies pairs: USDT - BITCOIN - ETHER but also in FIAT $ - €.
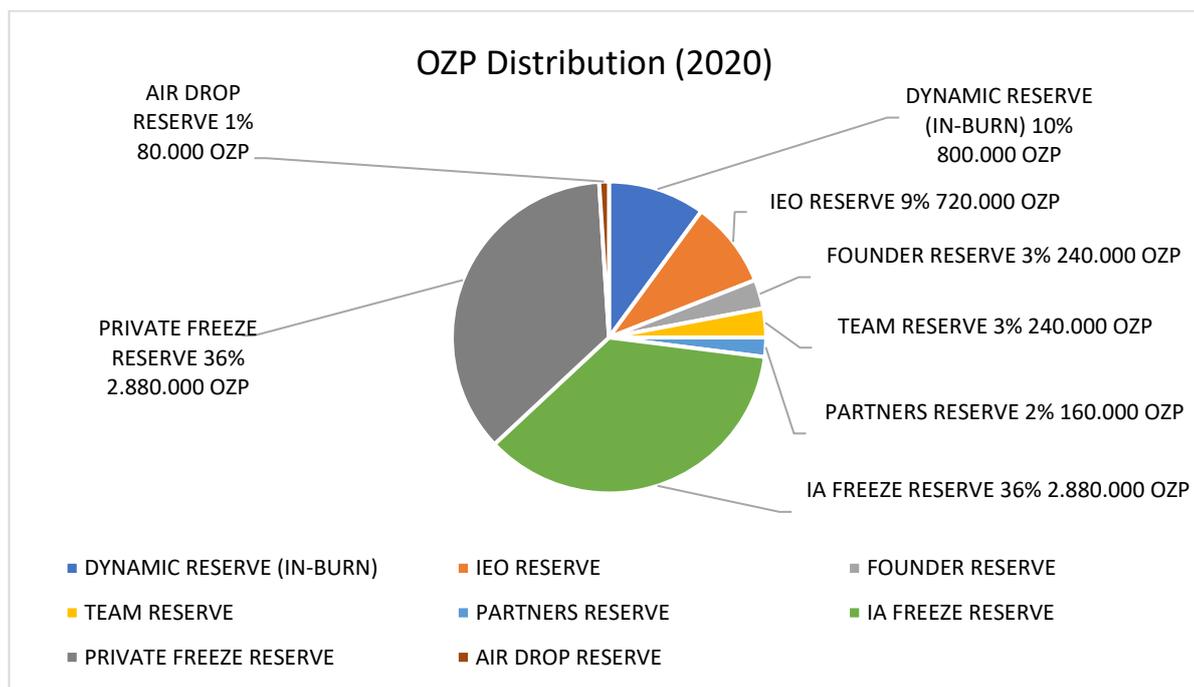

OZAPHYRE (OZP) 2020 strategy

Total Supply (TS): 8.000.000 OZP
Target value in USD: 1,10$ (about ~1,00€)
Percentage of OZAPHYRE (OZP) frozen: 72% or 5,760,000 OZP
Percentage of OZAPHYRE (OZP) to be guaranteed: 25% (2M OZP, i.e. a **minimum of $500,000 in ETH**).

Total SUPPLY IEO: 720.000 OZP

ROUND 1 – IEO ABIT: 0.55$ (opening on abit.com on **April 11, 2020 at 10:am - Paris**) – <u>**20.000 OZP**</u> – **PAIRS : USDT – ETH – BTC**
ROUND 2 – IEO P2PP2B: 0.75$ (opening on P2Pb2b.io on **Mai 8, 2020 at 10:am - Paris**) – <u>**50.000 OZP**</u> – **PAIRS : USDT – ETH – BTC**
ROUND 3 – IEO OZALENTOUR : 1.05$ (opening on Ozalentour.com on **Juin 13, 2020 at 10:am - Paris**) – <u>**650.000 OZP**</u> – **PAIRS : USDT – ETH – BTC**

Total Soft CAP IEO: $530.000
Total Hard CAP IEO: $763.500

Market listings and openings on our partner exchanges

Market entry on ABIT – P2PP2B & COINSBIT the September 19 at 10:00 am (Paris) at a price of 1.10$

Guarantee pair: ETH
Reference pair: USDT (1,10 USDT ~ 1,00 EUR)
Pair without guarantee: BTC

Guarantee 1 - Downside correction: $1.05 > Buy up to **15%** of Total Supply at **$1.0490**
Guarantee 2 - Upward correction: $1.15 > Sale up to **15%** of Total Supply at **$1.0990**
Number of ETH in Guarantee (after IEO): 3478 ETH (HARDCAP)
API called for the market price (after IEO): *API COINMARKETCAP & API TRADING*
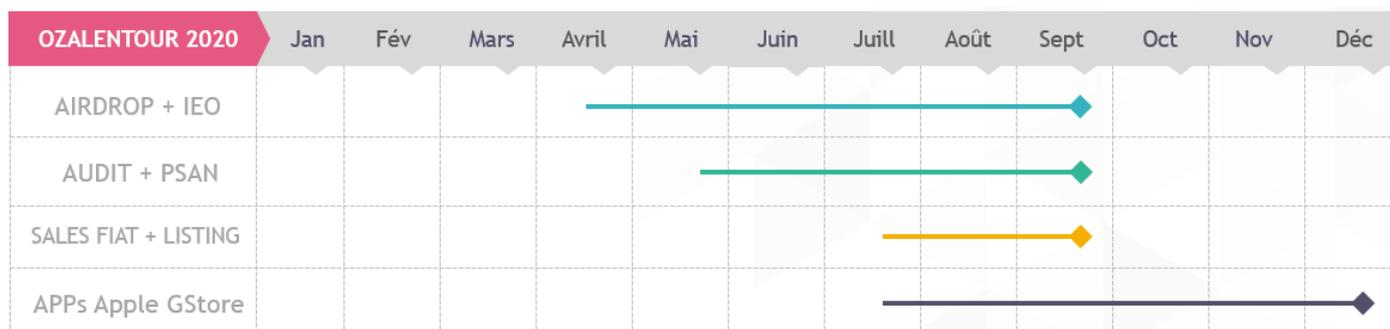

Total Marketcap targeted at launch (TMC 2020): $8,800,000
Minimum Total Marketcap (TMC 2020): $8,400,000
Maximum Total Marketcap (TMC 2020): $9,200,000

Roadmap

1. **AIRDROP + Pre-Sale of OZAPHYRE (OZP) on USDT-ETH-BTC PAIRS (IEO)**
2. **Auditing & Obtaining "VISA PSAN" from the French regulators AMF)**
3. **Marketing of the platform + Listing with 4 trusted partners**
4. **Development of Ozalentour app (AppStore and Play Store)**

OZALENTOUR 2020	Jan	Fév	Mars	Avril	Mai	Juin	Juill	Août	Sept	Oct	Nov	Déc
AIRDROP + IEO									◆			
AUDIT + PSAN									◆			
SALES FIAT + LISTING									◆			
APPs Apple GStore												◆

Following our meeting with the AMF in January 2020, the objective is to finish obtaining the VISA PSAN (Optional) as soon as possible and to start marketing FIAT-CRYPTO in September 2020.

For all new registrations, Ozalentour offers 1 OZP. Airdrops are also planned.

Total Supply forecast for April 2021 - 16,000,000 OZP (increase and distribution of the ecosystem in percentage)
Total Supply forecast for April 2022 - 32,000,000 OZP (increase and distribution of the ecosystem in percentage)
Total Supply forecast for April 2023 - 64,000,000 OZP (increase and distribution of the ecosystem in percentage)

Technical notes on BLOCKCHAINS

Blockchain is a technology for storing and transmitting information in a transparent and secure way without any central intermediary.

By extension, a blockchain constitutes a database holding the history of all the exchanges carried out between its users since its inception. This database is secure and distributed.

Good To Know: Blockchains are described as « permissioned » or « permissionless », with reference to the possibility of participating as a validation node. As part of the operation of OZAPHYRE (OZP) on the Ethereum protocol, access must be granted to run a validation node. As part of a "permissionless blockchain", anyone meeting the required technical criteria can run a validation node.

The main thing to remember is that the future OZAPHYRE blockchain (OZP) will be reserved for all: individuals, professionals, associations and local authorities. Thus, the registered members will be able to create "offers" (good plans) and offer goods and services with a percentage of cash back / discount.

These services are free to access in return for having a sufficient balance on your OZAPHYRE portfolio (OZP).

Open access fosters participation and innovation by encouraging healthy and fair competition for the benefit of consumers and local economy.

This is fundamental to developing more inclusive financial options on a global scale.

Transaction speed via Ethereum 1.0: 10 to 12 transactions /sec
Transaction speed via Ethereum 2.0: **160.000 transactions /sec (Planned for ~July 2020)**

Ethereum 2.0, what is it?

Ethereum 2.0 represents a major update for the Ethereum network: migration to Proof-of-Stake.

Ethereum 2.0 faster than VISA?

By doing some calculations, Vitalik Buterin and ChainLinkGod concluded that it would theoretically be possible to obtain a result of 160,000 TPS (using ZKtech Looping and, by extension, Chainlink). To give an illustration, Visa and Mastercard can process about 1700 TPS and PayPal 200 TPS.

OZAPHYRE (OZP) is set on the ETHEREUM ROADMAP.
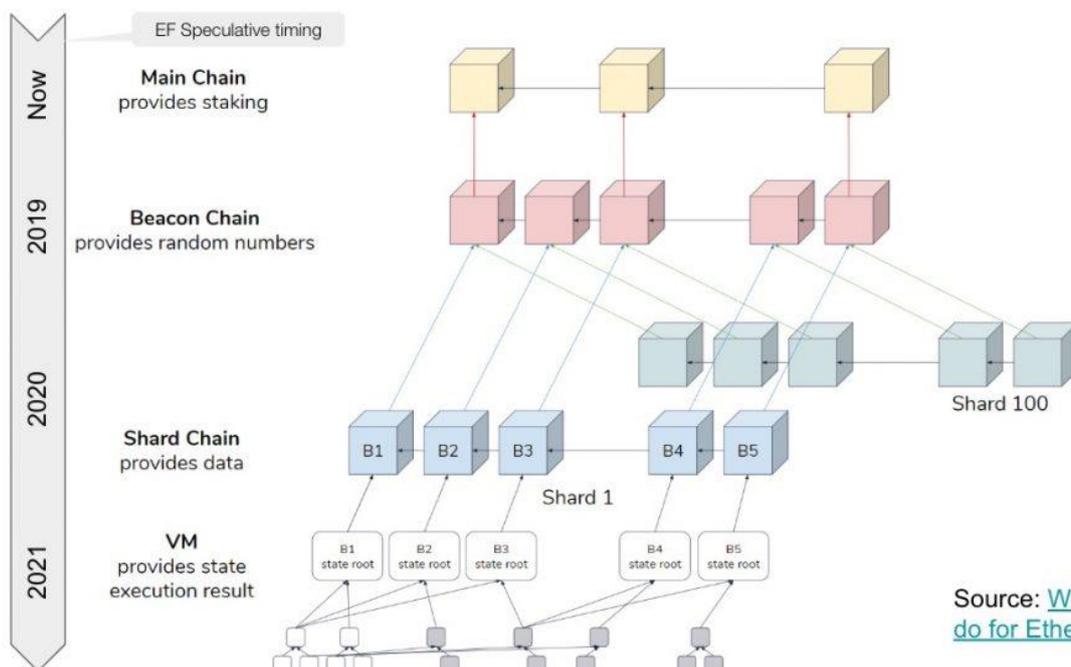

Increase your purchasing power with Ozalentour's "Cash Discount" 📊

During the R&D phase, we challenged ourselves to bring back purchasing power to our members. The idea was to offer digital cash to Ozalentour members participating in this incredible adventure! To achieve this vision: each seller will offer via Ozalentour a percentage of cash back varying from 5 to 99%.

Explanations:

On the Seller Side: each member with 100 OZP on their Ozalentour portfolio will be able to publish offers and good plans. As he creates the offer, he can choose a percentage of cash discount varying from 5 to 99% (or free in case of a free event)

Buyer Side : each member with a minimum of 1 OZP will be able to take advantage of cash discounts and buy, reserve or pay online or locally for goods and services on Ozalentour.

The "Remise Cash" is a money pot allowing you to have the choice between an immediate rebate or cashback in the event of a second payment made via Ozalentour.

Example :

1. Jeff displays an offer for his restaurant in Lille (59): offer from 10 OZP and 15% cash discount.
2. Gabriel from Quebec registered on Ozalentour has just 10 OZP in his pocket.
3. Gabriel can book a table directly online or come and pay his bill on the spot
4. Case 1: Gabriel chooses to use the immediate 15% discount, so he pays 8.50 OZP
5. Case 2: Gabriel chooses to convert it to cashback by paying the full amount, i.e 10 OZP
6. Continuation of Case 2: If Gabriel pays again with OZAPHYRE (OZP) in the Ozalentour ecosystem, then Jeff and his restaurant will send him the equivalent of 1.50 OZP (in addition to his new discount)

We start from this win-win principle: if a member registered on Ozalentour buys or pays with OZAPHYRE (OZP), he will be able to use his discount immediately or convert it to cashback for another time.

Publish an Offer (Good Plan) on Ozalentour (screenshot)

OZAPHYRE (OZP) package offers (for Members)

Each member can buy in tiers of offers for a 2.5% fee and transfer/exchange their OZAPHYRES (OZPs) free of charge from their wallet and or use their OZPs for local business purposes via **Ozalentour**.

ORIENTATION

- **Continue to develop our presence on social networks while keeping the good GrowthHacking mechanics which allowed us to achieve these results today.**
- **Expand our presence on Instagram and Twitter with an auto-sharing system based on hashtag technology.**
- **Expand image indexing on Pinterest**
- **Increase our presence on Linkedin**
- **Start our land prospecting with local shops and French town halls.**
- **Develop a multi-language version of OZALENTOUR (English, Russian, Spanish, Chinese ...)**

TARGETING

- **Municipalities and Interest Groups to evangelize the solution.**
- **Event Industry: young traffic - vector of virality - digital natives**

Conclusion

The aim of ProduClic is to provide a legal governance framework and to coordinate the networks, the reserve and the financial markets authorities. Playing the role of local currency, OZAPHYRE (OZP) via the Ozalentour aims to promote and develop local trade while providing purchasing power and new experiences for both sellers and consumers.
